

PROFILE

Co-founder and hands-on technology leader with twenty years of experience building and modernizing digital platforms. I led Deliverart from startup to full acquisition by TeamSystem, retaining responsibility across product, architecture, cloud and delivery. Today I build applied AI systems and business-critical products.

SELECTED EXPERIENCE

2016 - Present

**Co-founder, Founding CTO & Current Technology Lead / Deliverart**

Ongoing leadership role, including after the acquisition.

- Co-founded Deliverart and led technology and product from startup to full acquisition by TeamSystem.
- Owned product priorities, architecture, cloud and delivery; I now lead the post-acquisition technological evolution.
- Modernized frontends, APIs, infrastructure, tests, CI/CD and TypeScript SDKs incrementally while keeping the platform operational.

Next.js / TypeScript / Symfony / API Platform / AWS ECS / testing / CI/CD

2025 - Present

**Founder & Applied AI Lead / ErinTechLabs**

Independent venture focused on applied AI and product engineering.

- Take products from discovery to production while retaining ownership of architecture and implementation.
- Built an engine that recalculates monthly schedules in seconds instead of days of manual planning.
- Building Documento Facile: an AI pipeline for reading, normalizing and comparing documents over time with human oversight.

Applied AI / LLM systems / document pipelines / human-in-the-loop

2018 - Present

**Independent Senior Consultant / Verisure Italy**

Independent engagement on business-critical systems for the Italian market.

- Work across analysis, solution design and hands-on development of lead acquisition systems since 2018.
- Connect commercial processes, channels and digital platforms across a multichannel ecosystem.
- Improve automation, reliability and operational continuity while reducing the time required to deliver new flows across comparable channels.

DISTINCTIVE EXPERTISE

- Technology & product leadership
- Legacy modernization without disruption
- Post-acquisition technology integration
- Applied AI with human oversight

TypeScript / Next.js / Node.js / Symfony / API Platform / AWS / CI/CD / Applied AI

SELECTED SYSTEMS & OUTCOMES

Deliverart / Modernization strategy

I chose incremental modernization over a high-risk big-bang rewrite, evolving frontends, APIs, cloud services and delivery while the product remained operational. The strategy reduced migration risk and preserved release and operational continuity; typed contracts, shared SDKs, tests and CI/CD improved consistency across domains.

Next.js / TypeScript / Symfony / API Platform / AWS ECS / automated testing / CI/CD

Applied AI / Operational systems

I designed an engine that translates company rules, operational constraints and fairness criteria into balanced monthly schedules. In parallel, I build document pipelines combining LLMs, normalization, historical comparison and human oversight to produce understandable, verifiable and useful outcomes.

12 months of planning / monthly schedules / seconds instead of days of manual planning

Verisure Italy / Multichannel delivery

I work from the operational problem to the production solution: flow analysis, integration design, development and continuous improvement. The result is an ecosystem able to coordinate multiple channels and reduce the time required to deliver new lead acquisition flows across comparable channels.

multichannel / automation / reliability / operational continuity

| 2007        | Intern / Developer                          | Web Site S.r.l.  |

OPEN SOURCE & PRODUCTS

FocusPath

Creator and maintainer of an open-source visual keyboard-navigation scanner shipped as a CLI, library, web app and API.

focuspath

node-ffmpeg

Maintainer; 3.8M npm downloads in the 12 months ending August 2026 on earlier versions. Led the TypeScript modernization and v1.0 release.

node-ffmpeg

Documento Facile

An AI product for understanding and comparing personal documents while keeping human control visible.
